Families matter. Once a child is born, parents influence all aspects of a child’s development. Effective and consistent family engagement in a child’s academic setting is shown to relate to positive academic and behavioral outcomes. Higher rates of college enrollment and healthy behaviors have indicated that family engagement is beneficial for a child. Gather your co-workers and/or friends for a day to learn, collaborate, and become inspired by new ideas for your work with children and their families. We look forward to seeing you at the Early Childhood Conference on March 12, 2016.

ACTIVE MUSIC: BRAIN FOOD, BODY FUEL!

Presented by our keynote speaker, Miss Carole Peterson

In your room busting with action verbs? Music and movement should be a part of every young child’s day to promote brain and body growth. Developmentally appropriate music provides opportunities for children of all abilities to work on social, emotional, and physical skills. It also facilitates the acquisition of many early literacy skills: rhyme, pattern, and sequence, vocabulary, crossing the mid-line, rhythm, tracking, and more. Enhance your curriculum and get a shot of serotonin, too. ACTIVE MUSIC—for teachers and children of ALL abilities.
