GE SLO Assessment Plan (if required)

Includes G.E. SLOs?
Year One Report – The report will focus on challenges and changes the program would like to make as the course has been rolled out. The objective of the UUCC is to approve and changes and provide guidance for further improvement of the assessment.

Year Three (and Five) Report – The report is the same for year three and five. The report focuses on the assessment data collected and the responses to the data by the program. The objective is to see the assessment plan working and producing appropriate responses in the course and by the program.
The ASC questions will include new items regarding General Education SLO Assessment Plans including:

- A listing of all courses linked to general education SLOs
- The UUCC approved general education SLO assessment plans
- The assessment data for all general education SLOs
- The responses to all general education SLO assessment data
Each GE SLOs will be selected every five years, so every GE SLO goes through the same review. The random sample will be based on Student Credit Hours (SCH) for each course for each GE SLO selected for that year’s review. While any course could be chosen, it is more likely to have a course with many SCH to be selected. The assessment data will include the results of the assessments for the selected course and GE SLO and the program’s responses. This should be a subset of the data that is collected by the program and submitted once every six years to APC/ASC. The recent student graduates will combine the program assessment of the selected GE SLO for the year along with a student assessment of the selected GE SLO. The mapping of student transcripts is intended to evaluate if the student has taken courses that cover all GE SLO. This provides an understanding if there are gaps in our curriculum that allow a student to graduate without hitting a GE SLO. The final report would be provided to the Provost, UUCC, APC, ASC and other appropriate bodies that are involved with the review and integrity of the University’s assessment plans.
